

KiDS@4

the future is waiting for you

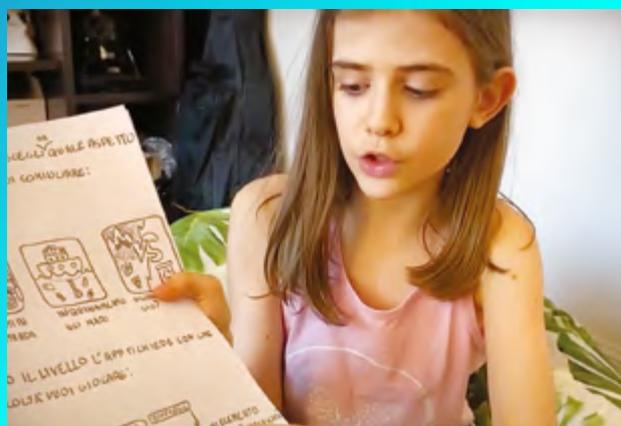

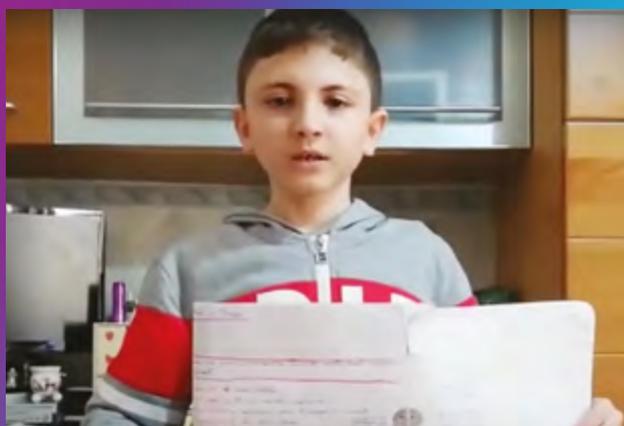

KiDS4

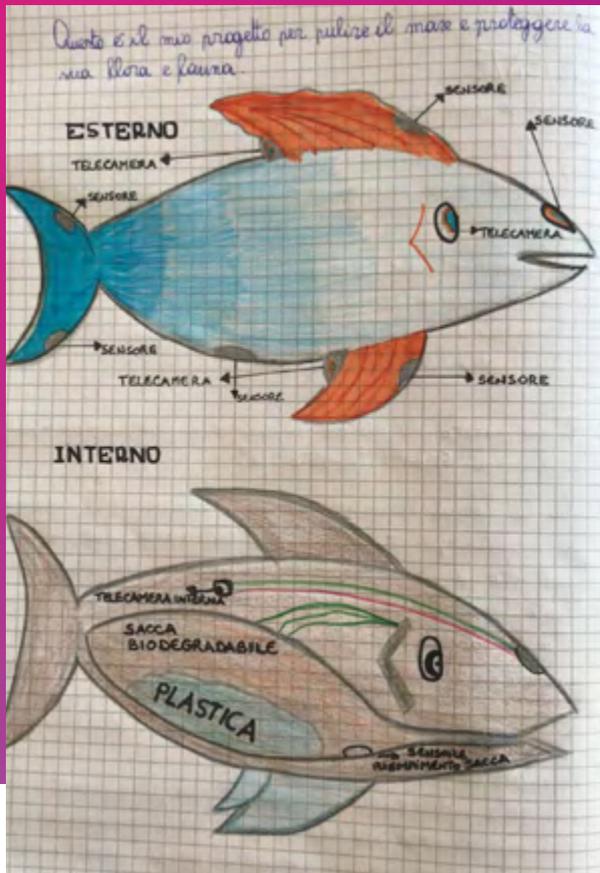

KiDS4 is a YouTube channel for children and schools with educational videos about global warming and climate change effects.

Videos deal with complex issues in a playful way, using the impact of images and the power of design to promote scientific content: global warming, food environmental impact, water footprint, energy conservation, food waste.

Besides, **KiDS4** collects ideas, objects, toys, apps designed by children to solve the problems our planet's facing.

It's easy to take part! Draw a picture of your invention or your idea of the future. Send us [here](#) a short video of your drawing and talk about it. Your video will be published on Channel KiDS4.

The aim is to involve schools and families and to create an online exhibition and even a physical exhibition in an important design museum to show the ideas engineered and prototyped by designers and fablabs.

KiDS4 is an educational project by ilVespaio
